851bHF

Safety valves made of gunmetal, angle-type with threaded connections

■ SUITABLE FOR

Liquids	neutral and non-neutral	
Hot water		

■ EXAMPLES OF USE

For the protection of:

- combined heating-/ cooling systems
- cooling- and/or heating circuits as well as heat exchangers of co-generation plants (CHP)
- cooling plants and closed cooling circuits

as well as:

- thermostatically protected closed-circuit water heating systems with flow temperatures up to 120°C for all static heights or rated output above 350 kW.

- heating- and cooling plants in building- and industrial technology
- co-generation plants (CHP)
- cooling- and chilling technology

Safety valves are set and sealed at the factory.

In order to achieve the highest possible heating output, up to three valves per system can be installed.

To protect indirectly heated heat generators in accordance with DIN 4751 Part 2 the safety valves have to be rated for the flow rate of the expansion water. For the valid blow-off capacities in m³/h water see this capacity chart.
